Summary:
- Passionate Full Stack Developer with expertise in Express, React, Node, Oracle Integration Cloud. Skilled in designing sleek UI, developing robust backend services, and creating RESTful APIs. Proficient in seamless integrations using Oracle Cloud Integration and APEX REST APIs. Experienced in solving complex challenges through innovative solutions.

Technical Skills:
- **Frontend** - React.js (React-Redux and Redux toolkit), Ejs, HTML, CSS.
- **Backend** - Node.js, Express.js, Oracle Integration Cloud.
- **Database** - MySQL, MongoDB, SQL Server, Oracle Apex

Experience:
Senior Software Engineer (SSE) - **Persistent Systems | June 2024 - Present**
- Developed a single page application using **React.js** and **Oracle Integration cloud** for the employees to mark and calculate their list of allowances which were closely tied with their salaries, this enabled a single source of input and visibility to the type of allowances employees have chosen and thus reduced the allowance selection time by **60%**.
- Contributed for developing an Alumni portal for the company, used **React.js** to develop the UI for downloading the documents like service letters, used **Oracle Integration Cloud** to create APIs that made these documents directly accessible from Oracle Fusion. This helped in reduced number of tickets required for provisioning of the documents.

Software Engineer (SE) - **Persistent Systems | June 2022 – June 2024**
- Made use of **React.js** to develop Annual increment planning application, **Nodejs**, **OIC** and **JavaScript** for the **backend APIs** and data syncs, this helped leaders reduce their decision taking time by **60%** for visualizing org-wide salary revision.
- Used **React.js** for Talent Identification App, enabling org leaders to assess candidates based on performance **40%** faster than before, developed oracle cloud integrations for data sync into oracle apex database.
- Developed the email triggers using **OIC, Expressjs and React.js** for front-end for project party application for the organization, this replaced the old .net mvc based application with a new and fast alternative. Used **SQL** to write data retrieval queries for **Apex**.
- Implemented robust Enterprise **Rest APIs** using **Nodejs** and **Oracle Integration Cloud**, designed stored procedures in **SQL Server**, optimizing it to **reduce** data retrieval time.
- Contributed in mentoring system for trainees using **Reacts**, **Nodejs**, **MongoDB** using internal APIs, enabling them with quick posting of doubts and connects thus reducing the query **resolution** time.
- Designed and developed **Training Management System** integrations using **React.js, Node.js and SQL server** stored procedures.
- Created integrations using **Oracle Integration Clou**d enabling seamless data transfers between different platforms.
- Worked on an app using **power apps** for **task allocation** in the organization that reduced the work distribution time, **power Automate** flows for data syncs and email alerts.
- Contributed on the front-end part of **interview auto analysis** using **React**, **MongoDB**, **Html**, **CSS**. This generated feedback from MS Teams, later worked on the integration with **Zoom** and **Webex** using **Nodejs** and generative AI. It reduced the rating time from **30 minutes** to maximum of **15 minutes**

Projects:
- **NetflixApp – Reactjs, Redux, Rest API, Html, CSS, JavaScript**
  Developed a Netflix clone having the basic functionality of browsing and searching different movies, series and content over the internet.
- **FoodZies – Reactjs,Redux,Rest API, Html, CSS, JavaScript**
  An online food ordering website to view and add items to cart, food choices based on user location, search and filter food items, made use of various react concepts in this project.
- **Bloggy2.0- React.js, Node.js, Express.js, MongoDB, JavaScript, Html, CSS**
  Implemented basic functionality as that of a blog website, implemented performance-based backend Apis and also prevented less re-rendering by using proper react hooks like react memo, lazy loading of images…etc.
- **Inventory management and E-commerce for Clothing** - **Reactjs, Nodejs, Expressjs, Material UI, Html, CSS, MongoDB, SQL Server, JavaScript**
  Developed mobile friendly application, Admin dashboard for inventory and statistical data. Shop for clothes on ecommerce, add to cart and Wishlist features.
- **Web-Weather** - **Rest API, Html, CSS**
  Made a responsive and mobile friendly UI. Weather API for real-time updates, geolocation Api to view area wise updates
- **Expense App** - **Expressjs, Nodejs, MongoDB, Html, CSS**
  Developed a website to add and manage your daily expenses.

Awards and Recognition:
- Identified as **Top Talent** for my contribution towards the company's performance and deliverables. **(FY23-24)**
- **Bravo Team Awards** for developing Talent Identification platform with strict timelines without compromising functionality. **(FY23-24 Q4)**
- **Bravo Team Awards** for contributing and getting placed 9th in Global hackathon held at Persistent Systems. **(FY22-23 Q4)**

Education:
- Walchand Institute of Technology, Solapur | Bachelor's Degree in Computer Science | **9.8 S.G.P.A** | August 2018 - June 2022
- Sanjay Ghodawat Institutes, Atigre | Higher Secondary School | **79.69%** | August 2017 - May 2018
- Indian Model School | Solapur | Central Board of Secondary Education (SSC) | **89.4%** | August 2015 – March 2016
